Q13. Power

Question: Calculate a raised to the power b (a^b) using recursion.

Input: Two integers a and b.

Output: The value of a^b.

Example:

```
2 5  -->  32
```

Solution:

```
import java.util.*;
class Main {
    static long power(long a, long b) {
        if (b == 0) return 1;
        return a * power(a, b - 1);
    }
    public static void main(String[] args) {
        Scanner sc = new Scanner(System.in);
        long a = sc.nextLong(), b = sc.nextLong();
        System.out.print(power(a, b));
    }
}
```
