Q15. GCD

Question: Find the GCD (HCF) of two numbers using recursion (Euclid's algorithm).

Input: Two integers a and b.

Output: GCD of a and b.

Example:

```
12 18   -->   6
```

Solution:

```
import java.util.*;
class Main {
    static long gcd(long a, long b) {
        if (b == 0) return a;
        return gcd(b, a % b);
    }
    public static void main(String[] args) {
        Scanner sc = new Scanner(System.in);
        System.out.print(gcd(sc.nextLong(), sc.nextLong()));
    }
}
```
