Q16. LCM

Question: Find the LCM of two numbers using recursion (via GCD).

Input: Two integers a and b.

Output: LCM of a and b.

Example:

```
4 6  -->  12
```

Solution:

```
import java.util.*;
class Main {
    static long gcd(long a, long b) {
        if (b == 0) return a;
        return gcd(b, a % b);
    }
    public static void main(String[] args) {
        Scanner sc = new Scanner(System.in);
        long a = sc.nextLong(), b = sc.nextLong();
        System.out.print((a / gcd(a, b)) * b);
    }
}
```
