Q17. Decimal to Binary

Question: Convert a decimal number to binary using recursion.

Input: A single integer N.

Output: Binary representation of N.

Example:

```
10   -->   1010
```

Solution:

```
import java.util.*;
class Main {
    static void binary(long n) {
        if (n < 2) {
            System.out.print(n);
            return;
        }
        binary(n / 2);
        System.out.print(n % 2);
    }
    public static void main(String[] args) {
        Scanner sc = new Scanner(System.in);
        binary(sc.nextLong());
    }
}
```
