Q21. Replace Character

Question: Replace every occurrence of one character with another in a string using recursion.

Input: A string S and two characters c1, c2.

Output: S with every c1 replaced by c2.

Example:

banana a o --> bonono

Solution:

```
import java.util.*;
class Main {
    static String replace(String s, char c1, char c2, int i) {
        if (i == s.length()) return "";
        char current = s.charAt(i) == c1 ? c2 : s.charAt(i);
        return current + replace(s, c1, c2, i + 1);
    }
    public static void main(String[] args) {
        Scanner sc = new Scanner(System.in);
        String s = sc.next();
        char c1 = sc.next().charAt(0), c2 = sc.next().charAt(0);
        System.out.print(replace(s, c1, c2, 0));
    }
}
```
