Q22. Check Sorted Array

Question: Check whether an array is sorted in non-decreasing order using recursion.

Input: N, followed by N integers.

Output: "Sorted" or "Not Sorted".

Example:

5 , 1 2 3 4 5 --> Sorted

Solution:

```
import java.util.*;
class Main {
    static boolean sorted(int[] a, int i) {
        if (i >= a.length - 1) return true;
        if (a[i] > a[i + 1]) return false;
        return sorted(a, i + 1);
    }
    public static void main(String[] args) {
        Scanner sc = new Scanner(System.in);
        int n = sc.nextInt();
        int[] a = new int[n];
        for (int i = 0; i < n; i++) a[i] = sc.nextInt();
        System.out.print(sorted(a, 0) ? "Sorted" : "Not Sorted");
    }
}
```
