## Q25. Recursive Linear Search

**Question:** Search for an element in an array using recursive linear search.

**Input:** N and x, followed by N integers.

**Output:** Index of the first x, or -1 if not found.

**Example:**

```
5 7 , 3 9 2 7 5  -->  3
```

**Solution:**

```
import java.util.*;
class Main {
    static int search(int[] a, int x, int i) {
        if (i == a.length) return -1;
        if (a[i] == x) return i;
        return search(a, x, i + 1);
    }
    public static void main(String[] args) {
        Scanner sc = new Scanner(System.in);
        int n = sc.nextInt(), x = sc.nextInt();
        int[] a = new int[n];
        for (int i = 0; i < n; i++) a[i] = sc.nextInt();
        System.out.print(search(a, x, 0));
    }
}
```
